

COMPANION TO THE AGENTIC LAYER PROPOSAL

The go-to-market Workforces for the TXN launch.

Two AI Workforces that build TXN's audience and pipeline while the platform ships: a **Content Workforce** to create an audience, and an **Outbound Workforce** to create demand. Both live within 30 days, run by Novosapien.

partner pricing

01 · EXECUTIVE SUMMARY

The platform gets you to launch. These Workforces get you to market.

The Agentic Layer proposal builds intelligence into the TXN product. This companion proposal puts a revenue engine beside it: content that makes the market notice TXN before October, and outbound that fills the calendar with qualified conversations from day one, without TXN hiring a marketing team or an SDR team.

Create an audience

Content Workforce

A Business Audience Lab engagement: a 1–2 day workshop captures TXN's voice, pillars, and visual identity, then the Workforce produces written and visual content across LinkedIn, X, blog, and newsletter: 200+ pieces a month, every one in TXN's voice, with a dedicated Forward Deploy Engineer accountable for quality.

£3,000 setup · from **£1,750/mo** committed, or £1,000/mo pay-as-you-go

Create demand

Outbound Workforce

A Pipeline Lab engagement: five specialised AI Employees (research, email, LinkedIn, voice, and campaign orchestration) work TXN's target list end-to-end. Every prospect researched, every message personalised, every touchpoint logged, meetings booked into TXN's calendar.

£5,000 setup · **£1,500/mo** run fee · leads & AI processing at transparent cost and licence

Test-partner terms

Why the outbound pricing is different

We charge £1,500 a month to manage the outbound engine on our side: a real operating cost we cannot exclude. Every other cost, from lead purchases to AI processing, is passed through based on what we are billed plus an administration fee, itemised on the invoice. Once live operation has established what outbound truly costs, we agree per-lead pricing together. TXN gets early-partner economics; we get a reference deployment. Reviewed together after the first 90 days.

78%

of buyers purchase from the vendor that responds first

8–12

touches to win a meeting; most human reps stop at 2

3–6 mo

to make a new SDR productive. These Workforces: 30 days

02 · CONTENT WORKFORCE

Your market is researching before it ever speaks to sales.

Developers, fintechs, and card programmes will size TXN up online long before the first call. The Content Workforce keeps TXN visible every week, in TXN's voice, on TXN's pillars, without pulling anyone off the launch.

It starts with a workshop. Four foundational assets in 1–2 days:

Company Manifesto TXN's mission, market position, and the change it creates for customers	Content Pillars The 3–5 themes TXN will own: agentic payments, issuing, developer experience	Brand Voice Guidelines Tone, vocabulary, dos and don'ts, codified so every piece sounds like TXN	Visual CI ingestion TXN's colours, fonts, and imagery ingested so every visual is on-brand
--	---	---	---

Ongoing production, every month

- **Written content:** LinkedIn posts, blog articles, newsletter editions, X threads
- **Visual content:** carousels, social graphics, blog headers, quote cards
- **Idea generation:** fresh ideas weekly, tied to pillars and market trends
- **Multi-channel adaptation:** one idea becomes content for every platform
- **Content calendar:** weekly publishing schedule, reminders, auto-posting

Run and tuned by a human

- **Dedicated Forward Deploy Engineer:** one point of contact, weekly coordination
- **Tone & performance tuning workshops:** repeated until the voice is right
- **Monthly performance reviews:** what's working, and where we double down
- **Approval stays with TXN:** as hands-on or hands-off as you choose

You stay in control until you trust the system to run

PHASE 1 Human-initiated · Human-validated TXN approves every piece before it publishes. Full control while trust builds.	PHASE 2 Agent-initiated · Human-validated The Workforce drafts proactively; TXN reviews before publishing. Faster, still supervised.	PHASE 3 Agent-initiated · Agent-validated The engine runs autonomously with quality validation. TXN's team focuses on the launch.
--	--	---

The 30-day guarantee: TXN's channels are live and publishing within 30 days of kickoff, or the setup fee is refunded. No caveats.

03 · CONTENT WORKFORCE · THE ALTERNATIVE

Five pieces a week: the in-house team versus the Content Workforce.

To produce five publish-ready pieces a week in-house, TXN would hire a small marketing team: a manager to set direction, a writer to produce the copy, a designer for the visuals. At indicative UK market rates, the comparison is not close.

Role	Indicative salary	All-in / year*
Marketing Manager	£45,000-£55,000	≈ £60,000
Social Media Content Writer	£28,000-£35,000	≈ £38,000
Graphic Designer	£30,000-£38,000	≈ £41,000
Team of three	£103,000-£128,000	≈ £139,000

THE IN-HOUSE TEAM

≈ **£535**

per piece of content

Three salaries at ≈ £11,600 a month, producing five pieces a week: **22 pieces a month.**

THE CONTENT WORKFORCE

£8.75

per piece of content

Committed Core tier at £1,750 a month, producing **200 pieces a month.**

61x

lower cost per piece. £8.75 against ≈ £535 for the same piece of on-brand content.

9x

the output. No longer 22 pieces a month: 200.

This is not an argument against marketers.

It is an argument about what they should spend their time on. The judgement a good marketing team brings is exactly what the workshop captures and the trust phases protect: TXN keeps direction and sign-off throughout. What the Workforce removes is the production grind of five pieces, every week, without fail, plus the 2–3 months of recruiting per role before the first in-house piece ever ships.

* Indicative UK market salary ranges (mid-2026 benchmarks), midpoint of range plus ≈20% employer costs: National Insurance, pension, tools, and overheads. Actual figures vary by region and seniority.

Commit for the best rate, or pay as you go.

Both routes include the workshop assets, the full production engine, the Forward Deploy Engineer, and the 30-day guarantee. The committed programme carries the best per-piece rate; pay-as-you-go trades rate for flexibility and can convert to a committed tier at any point.

Committed programme				Pay-as-you-go		
				Flexible · monthly		
Best rate · 12 months				Monthly spend	Pieces	Per piece
Tier	Pieces / mo	Monthly	Per piece			
Core	200	£1,750	£8.75	£1,000 baseline	80	£12.50
Growth	300	£2,500	£8.33	+ £500 top-up	+45	£11.11
Scale	500	£3,500	£7.00	+ £1,000 top-up	+95	£10.53
				+ £2,000 top-up	+200	£10.00
Upgrade tiers at any point mid-programme. 12-month term; the engine of voice, pillars, and trust compounds over the year.				Start at £1,000 a month with no volume commitment. Top-up rates step down with spend but always sit above the committed per-piece rate; flexibility carries a premium. Top-ups stack within a month.		

One-time setup, both routes

A full week of concentrated effort. The 1–2 day workshop produces the Company Manifesto, Content Pillars, Brand Voice Guidelines, and Visual CI ingestion. The engine is then configured on TXN's voice and pillars, connected to every channel, and tested end to end before the first piece ships. Covered by the 30-day go-live guarantee.

£3,000

All figures exclusive of VAT.

05 · OUTBOUND WORKFORCE

You know exactly who should be buying TXN.

Card programmes, fintechs, and platforms with a clear ICP: the constraint is not the market, it is the hours to research, reach, and follow up with every prospect. The Outbound Workforce is five specialised AI Employees working as one coordinated system, with TXN in control of every message until it trusts the engine.

AI Employee	The work it does
Research Agent	Deep-dives every prospect: role, company news, recent activity, pain points. Builds the context that makes outreach land.
Email Agent	Writes and sends personalised sequences, not templates. Each message tailored to the prospect and the research. Follow-ups managed automatically.
LinkedIn Agent	Connects and engages where decision-makers are: connection requests, InMails, conversations nurtured towards meetings.
Voice Agent	Outbound calls with a custom voice trained on TXN's tone and value propositions. A real conversation that qualifies interest and books meetings.
Campaign Agent	Orchestrates timing, channel sequencing, and A/B testing. No lead contacted twice on the same channel; every touchpoint logged.

Included in the engagement

- Half-day ICP and targeting workshop
- Email deliverability setup: DKIM, DMARC, SPF
- Custom voice training on TXN's brand
- Calendar integration for meeting booking
- Dedicated Forward Deploy Engineer + monthly reviews

Works from TXN's data

- TXN's own lead database or CRM
- LinkedIn Sales Navigator
- Target account lists and event attendee lists
- Data providers (Apollo, ZoomInfo, Clay), passed through, pre-approved

The same three trust phases as the Content Workforce apply: TXN approves every message until the system has earned autonomy.

Priced in the open.

We have not yet fully costed outbound at production scale, so instead of padding a number we run TXN as a test partner: a fixed monthly fee for us to manage the engine, and every other cost passed through based on what we are billed plus an administration fee. Nothing is spent unseen; every lead purchase and every run is approved by TXN first.

£5,000

Setup, one-time

Two full weeks of configuration effort: ICP workshop, five agents configured, deliverability build, voice training, calendar integration, and end-to-end testing.

£1,500/mo

Run fee, to manage the engine

Covers the dedicated Forward Deploy Engineer who runs the engine every day: monitoring, tuning, follow-ups, monthly reviews. A real human cost we cannot exclude.

pass-through

Usage, plus admin fee

Compute, lead data, and voice minutes billed monthly at what we are billed plus an administration fee. Per-lead pricing agreed once live running has established the true cost.

The costs we will be transparent about

Each lead worked by the engine consumes three things: Claude compute for research and message generation, lead data from providers such as Apollo, and ElevenLabs voice minutes for calls. We track each of these per lead and **pass the monthly bills through based on what we are charged, plus an administration fee**, itemised on the invoice. The AI cost is the small number here; the lead purchases are the real spend, so no database is bought and no run is launched without TXN signing off the cost first.

Cost line	How billed
Claude compute, monthly	cost + admin fee
Lead data (Apollo), pre-approved	cost + admin fee
ElevenLabs voice, monthly	cost + admin fee

Test-partner terms

This structure holds for the first 90 days of live operation. We then review actual volumes and costs together and agree go-forward per-lead pricing, with TXN's early-partner economics recognised in whatever follows. Either party may exit at each monthly boundary.

What the monthly invoice looks like

£1,500 run fee, plus the month's Claude compute, lead purchases, and voice minutes, each itemised at the price we were billed plus the administration fee. Nothing else.

07 · PROJECT PLAN

Two weeks of setup. Both Workforces live in 30 days.

One kickoff, two parallel streams, a single Forward Deploy Engineer coordinating both. The workshops in weeks 1–2 are the only meaningful demand on TXN's time.

Step	When	Content Workforce	Outbound Workforce
Setup	Week 1	1–2 day workshop: Manifesto, Pillars, Voice, Visual CI. Engine configured, first batch drafted. Setup complete.	Half-day ICP workshop. Lead database audit, messaging strategy. Deliverability build begins.
Setup	Week 2	Light touch: TXN reviews and approves the first batch. No further configuration effort.	The heavy week: five agents configured, voice trained, calendar integrated, test sequences run.
Launch	Weeks 3–4	Publishing live across LinkedIn, X, blog, newsletter. 30-day guarantee fulfilled.	Sequences live across email, LinkedIn, and voice. Meetings start booking.
Optimise	Months 2+	Tone tuning, monthly reviews, trust-phase progression.	A/B testing, refinement, 90-day pricing review.

08 · WORKING TOGETHER

What we need from TXN, and how this fits the platform build.

The demand on TXN's side is deliberately light: the workshops in the first fortnight, then a few hours a month. Everything else is ours to run.

What we need from TXN

- Workshop participants: leadership, marketing lead, subject-matter experts
- Brand assets: logos, colours, fonts, imagery
- Channel access: LinkedIn company page, blog/CMS, newsletter platform
- ICP definition, existing lead lists, Sales Navigator access
- A few hours a month thereafter: approvals and the monthly review

Fit with the platform engagement

The go-to-market Workforces run independently of the Agentic Layer build, with a separate stream and separate milestones, so neither engagement gates the other. Content pillars draw on the platform story as it ships: the developer portal, the console, and the October launch give the calendar its strongest material.

09 · COMMERCIAL SUMMARY & ACCEPTANCE

One engagement, two Workforces, month-one economics you can hold us to.

All figures exclusive of VAT. Setup fees invoiced at kickoff; monthly fees invoiced monthly in advance; usage (compute, lead purchases, voice minutes) invoiced monthly in arrears at billed cost plus an administration fee.

Item	One-time	Monthly	Usage
Content Workforce, committed Core (200 pcs/mo)	£3,000	£1,750	—
optional or pay-as-you-go baseline (80 pcs/mo)	£3,000	£1,000	top-ups £500-£2,000
Outbound Workforce, test-partner terms	£5,000	£1,500	compute, leads & voice + admin fee
Both Workforces, first-month position	£8,000	£3,250	usage as above

Terms

- Content Workforce: 12-month programme on the committed route; pay-as-you-go is monthly rolling.
- Outbound Workforce: monthly rolling; test-partner pricing reviewed jointly at day 90.
- 30-day go-live guarantee on both Workforces: live in 30 days or the setup fee is refunded.
- TXN approves all published content and outreach until it elects to progress the trust phases.

Relationship to the platform engagement

- This proposal is a companion to, and commercially separate from, the TXN Agentic Layer proposal.
- Contracting will be papered under the Novosapient–TXN master services agreement currently in preparation; this document defines the commercial schedule for that agreement.
- Acceptance below authorises kickoff scheduling ahead of MSA execution.
