

Open Questions & Gap Register

The open questions across the TXN agentic-AI scope — what blocks build, what TXN needs to decide, and what's needed from the delivery partners — with the answers captured in the 11 June review.

Prepared by Novosapien Date 15 June 2026 · v3 Status 6 answered · 2 parked · 39 open

Each question is tagged by who closes it — **build-blocking**, a **TXN decision**, a **partner dependency**, or a **design** call — and carries the session it was raised in and its status. The **11 June review worked through #19**; answered rows carry an **A:** note. The remainder will be answered in the next pass.

BUILD

ours to build — blocks the dependent piece

CLIENT

TXN product / commercial / risk decision

PARTNER

needed from DT / Stackworkz / Super Ultra / provider

DESIGN

our design work — land & iterate

Build-blocking

Owner: **Novosapien build** — resolve before the dependent surface can ship.

#	QUESTION	AREA	ANSWER IN	RAISED	STATUS
6	Audit immutability / append-only + retention — assumed immutable; retention window + storage location undecided. A (11-06): immutable confirmed; storage → the DT data lake ; hot/cold split + 7-yr PCI retention still being worked with DT.	Access Layer	audit-attribution	01-06	Open
9	AI-permission config — build the org/user permission mirror for non-Console access. A (11-06): org = super-user, users = subsets; gate tools per user ID (OAuth for the Claude/MCP path); likely a separate AI/MCP key (JWT vs key TBD with DT); long-lived, rotate/suspend on leak.	Access Layer	agent-access-layer	01-06	Open
21	Sign-up / login design — not scoped in the portal MVP; needed to gate MCP/sandbox + capture leads. A (11-06): phase two of the portal; capture email + company even without full login; a separate lighter lead- MCP; track usage to feed sales.	Developer Support	access-gating	09-06	Open

#	QUESTION	AREA	ANSWER IN	RAISED	STATUS
22	Persistence store — where saved rendered views + recurring-task definitions live. A (11-06): store in the same Stackworkz/Console DB (single source of truth, one clean IO; avoids two DBs). Recurring task = a job. Caveat: watch volume so agentic caching doesn't overload their DB.	Full Agentic	session- persistence	05-06	Answered

Client decisions

14

Owner: **TXN** — product, commercial, or risk calls (best taken in a decisions round + the Internal Ops vision session).

#	QUESTION	AREA	ANSWER IN	RAISED	STATUS
1	Product config size — ~200 fields or 50-60 properties? A (11-06): don't fixate on a number — it's large & grows, nothing mandatory; configure at feature level with AI recommendations by region/vertical.	Co-pilot / Access	vision co-pilot	13-05/01-06	Answered
3	Site-wide LLM ownership — "Teraflow" on 29 May = Novosapien's former brand (rebranded). Same party; the LLM is Novosapien's.	Developer Support	developer- support	29-05	Answered

#	QUESTION	AREA	ANSWER IN	RAISED	STATUS
4	System-defined alert corpus — which alerts is TXN obliged to raise? A (11-06): still scoping (blocked partly on DT log access); known: core transaction declines + infra-level thresholds; signals land in central logging + the data lake.	Inbox & Alerts	alert-detection	02-06	Open
16	AI-layer PII / residency / redaction — may cardholder PII appear in chat/audit logs; residency + redaction policy? A (11-06): limit PII; redact from logs; EU data stays in Europe (at rest); provider APIs secure — confirm standards for a financial product.	Access Layer	audit-attribution	assumption	Answered
18	User-defined optimization metric — should the user set an objective the agent optimises toward (and suggest more)? A (11-06): not a separate feature — the objective is the user's request per interaction; long-horizon tasks use a checklist.	Full Agentic	full-agentic-experience	13-05	Answered

#	QUESTION	AREA	ANSWER IN	RAISED	STATUS
19	CRM ↔ Console data split — which client data lives only in the CRM vs needed in the Console. A (11-06): CRM = sales/onboarding; Console DB = operational; handoff at contract signing (CRM triggers the build); console captures only name + email, not a full sync.	Architecture / Int Ops	architecture integrations	10-06	Answered
23	External name for "Co-pilot" — Microsoft trademark (Dorte). Decide the market name before launch collateral. A (11-06): names floated (Nova, Dot, Jarvis...) but explicitly still undecided.	Co-pilot	co-pilot	04-06	Open
24	Per-level cost / token model — cost-per-1000-calls to set the free-surface access gates (lan).	Dev Support / Alerts	developer-support	09-06/02-06	Open
25	Reconciliation's home — its own payment-ops component, or stays in Internal Ops?	Internal Ops	internal-ops-agents	06-03	Open

#	QUESTION	AREA	ANSWER IN	RAISED	STATUS
26	AI risk-tolerance boundaries — what's never allowed even with approval? What blast radius forces a human override?	Cross-cutting	vision agent-access-layer	13-05 \$8	Open
27	Cross-program benchmarking consent — "anonymised" can still identify with few clients. Consent + thresholds (later).	Inbox & Alerts	agent-inbox-alerts	02-06	Open
28	In-product pricing transparency — pricing in the Console (so the co-pilot can reference it) or held externally?	Co-pilot	co-pilot	13-05 \$8	Open
29	Corporate-email gating policy — avoid junk signups (Marqeta lesson) without blocking genuine startups.	Developer Support	access-gating	09-06	Open
30	Voice support (Tier 2) — voice agent (~18-30p/min) vs text-first. Validate with a user group post-launch.	Developer Support	support-triage	09-06	Parked

Partner dependencies

Owner: **DT** · **Stackworkz** · **Super Ultra** · **providers** — coordinate in partner syncs.

#	QUESTION	AREA	OWNER / ANSWER IN	RAISED	STATUS
8	MCP-server ownership split — docs/dev-portal MCP (Stackworkz) vs card-acquiring-API MCP (DT?). Avoid duplicates.	Access Layer	Stackworkz / DT	29-05	Open
10	Product webhook — will DT add it, and on what timeline? (Underpins change-impact alerts.)	Access / Alerts	Direct Transact	01-06	Open
11	Core API stability + versioning — when stable enough to build tools against; breaking-change policy.	Access Layer	Direct Transact	01-06	Open
12	Data-lake schema — when does DT share it? A (11-06): DT actively building it (draft arch incoming; early/changeable) — raw→curated→consumption layers, tabular SQL + JSON/ 1536-dim vectors , row-level security, settlement data stored for later reconciliation.	Access Layer	Direct Transact	01-06	Open
13	Alerting-system build ownership — DT narrowed to a context-less "post an alert" API; nobody scoped to build detection.	Inbox & Alerts	DT / unowned	02-06	Open
20	AI-ready downloadable doc file — the `LLMS.txt`-style file; Stackworkz vs AI-generated, and cadence.	Developer Support	Stackworkz / Super Ultra	09-06	Open

#	QUESTION	AREA	OWNER / ANSWER IN	RAISED	STATUS
31	Public sandbox API-key model — does the sandbox need a per-user key? Changes whether/when sign-up (#21) is required.	Developer Support	Direct Transact	09-06	Open
32	Endpoint QA / test status — ~80 endpoints, ~80-90% untested; affects mock-API fidelity for early build.	Access Layer	Direct Transact	05-06	Open
33	Console instrumentation depth — page state, component IDs, action handlers (Michael flagged plug-in work).	Co-pilot / Full Agentic	Stackworkz	13-05	Open
34	Umbraco doc APIs + vector index — docs via API for AI search + draft-API for the knowledge engine.	Developer Support	Stackworkz	09-06/10-06	Open
35	Console component library handle — addressable React/MUI components for the agent to render (generative UI).	Full Agentic	Stackworkz / Super Ultra	29-05/05-06	Open
36	A2A provider enablement — direct A2A connections from providers; MCP-as-message fallback meanwhile.	Access Layer (A2A)	Anthropic / providers	05-06	Open

#	QUESTION	AREA	OWNER / ANSWER IN	RAISED	STATUS
47	Self-healing code ownership — can self-healing extend to code (Sentry → PR), or only docs/knowledge? A (11-06): code self-healing is off the table for now — DT owns the codebase post-handover (strict policies) and Novosapien lacks log/data access (DT firewall). Focus is self-healing docs/knowledge.	Internal Ops	self-healing-docs	11-06	Parked

Design & open

16

Owner: **Novosapien design** — several are "land something and iterate from real-user feedback" (Ian).

#	QUESTION	AREA	ANSWER IN	RAISED	STATUS
2	MCP permission model — program- + user-defined permissions, switchable per level; how API keys map.	Access Layer	mcp-server permission-scoping	01-06	Open
5	Idempotency on mutating MCP calls — assumed; confirm the requirement.	Access Layer	mcp-server	assumption	Open
7	Notification delivery — fallback/retry on failure + a default channel (assumed, not discussed).	Inbox & Alerts	notification-routing	assumption	Open

#	QUESTION	AREA	ANSWER IN	RAISED	STATUS
14	Scheduled-report failure handling — missed/failed runs retried; user told of a delay vs silent drop?	Inbox & Alerts	scheduled-reporting	assumption	Open
15	Alert priority field + fan-out — is there a `priority` payload field, and do high-priority items fan out to multiple surfaces?	Inbox & Alerts	notification-routing	assumption	Open
17	AI-analysis consistency boundaries — read-after-write guards before analysing? (Novosapien inference.)	Inbox & Alerts	ai-analysis-impact	assumption	Open
37	Process-surfacing altitude — how much multi-agent work to show; land one universal level & iterate.	Co-pilot / Full Agentic	process-surfacing	04-06/05-06	Open
38	Real-time vs cached writes — fire each call live, or cache & commit on review? Confirm console-wide.	Co-pilot	co-pilot	04-06	Open
39	Stuck-user replay — restate goal → replay completed steps → correct. Agreed, undesigned.	Co-pilot	conversational-qa	04-06	Open

#	QUESTION	AREA	ANSWER IN	RAISED	STATUS
40	Bounding open-ended composition — the agent "has all the data, no destination." Guard rails — the hardest problem.	Full Agentic	generative-ui-rendering agent-orchestration	05-06/29-05	Open
41	Generative UI inside client's Claude — how much renders through the A2A path vs the TXN surface?	Full Agentic / A2A	full-agentic-experience a2a-endpoint	05-06	Open
42	One MCP server vs several — leaning monolith with per-turn tool gating; confirm as tool count grows.	Access Layer	agent-access-layer	01-06	Open
43	Simulation scope & timing — Internal Ops scope vs parked launch component; when built/used (cold-start).	Internal Ops	internal-ops-agents	10-06	Open
44	Dev-Support ↔ Internal-Ops boundary — triage entry point vs resolution + knowledge loop. Confirm the contract.	Dev Support / Int Ops	developer-support internal-ops-agents	10-06	Open
45	Component success metrics — quantify the §7 evals per component with TXN (several are placeholders).	Cross-cutting	components	multiple	Open

#	QUESTION	AREA	ANSWER IN	RAISED	STATUS
46	Internal Ops vision / dedicated session — Ian said it needs its own vision (resolves #25, #43, #44).	Internal Ops	internal-ops-agents	10-06	Open
