novosapien

Support & Service Level Agreement

Dated 2026 · between **Novosapien** (Novosapien Global Ltd, a company registered in England and Wales, company no. 17308181, registered office Aldgate Tower, 2 Leman Street, London E1 8FA) and **TXN** (TXN Global Limited, a company incorporated in Cyprus, company no. , registered office Office 303, 20 Iacovou Patatsou, Egkomi, 2408 Nicosia, Cyprus).

Background. Novosapien built the agentic AI layer for the TXN platform under the Master Service Agreement between the parties. This Agreement is the managed support and maintenance for that layer. It is a managed service, not a break-fix contract: Novosapien runs or supports each component, keeps it healthy as TXN's Core API and documentation change, and responds to Incidents against the targets in Schedule 2.

Components arrive in support at different times and are hosted differently. Novosapien currently hosts the Knowledge Hub AI Assistant in its own cloud subscription. The Console components run in the TXN Production Environment, which Direct Transact operates and is the only party that may deploy to. This Agreement handles both, and the move from one to the other, expressly.

1. Definitions

1.1 "Supported System" means the components listed in Schedule 1, each from its own Service Commencement Date. **"Supported Component"** means any one of them. **"Support"** means the services in clause 3. **"Support Tier"** means the tier selected in Schedule 2. **"Service Hours"** means the human-response hours of the selected Support Tier. **"Incident"** means a failure of a Supported Component to operate materially as intended. **"Priority"** means the severity of an Incident under Schedule 2. **"Availability"** means the percentage of time a Supported Component in Hosted Mode is available in a calendar month, measured under Schedule 2. **"Support Allocation"** means the monthly hours in clause 3.4. **"Business Day"** means a day, other than a Saturday, Sunday or public holiday, when banks in London are open for business. **"AI Model Services"**, **"TXN Production Environment"** and **"Production Cutover"** have the meanings given to them in clause 1.2 of the Master Service Agreement.

1.2 Automated monitoring and alerting under clause 3.1 run continuously, 24 hours a day, at every Support Tier. The Support Tier determines when Novosapien's people respond.

2. Commencement, term and charges

2.1 Commencement. This Agreement starts on the **Commencement Date**, being the date the Knowledge Hub AI Assistant first operates in live service for TXN's users, confirmed in writing by both parties. It runs for an initial term of **12 months** from that date, then continues monthly until ended under clause 11.3.

2.2 Components arrive in support one at a time. Each Supported Component is supported from its own **Service Commencement Date**: the date that component first operates in live service in the TXN Production Environment and the parties confirm it in writing. **No date is fixed for the Console components in Schedule 1 Part B**, because the date TXN takes them live is not yet set. A component is not supported, and carries no service level, before its Service Commencement Date. The parties record each confirmed date in the monthly service report, which is then the agreed record of what is in support.

2.3 Support fee. The support fee for the selected Support Tier is set out in Schedule 3, invoiced monthly in advance and exclusive of VAT. **No support fee is separately payable for any month in which TXN is also paying the Phase 2 team charge, or an agreed Phase 3 retainer, under the Master Service Agreement**: those charges cover support for the months they run. The support fee begins with the first month in which neither is payable. Novosapien may review the fee at each anniversary on 60 days' notice, with any increase capped at the change in the UK Consumer Prices Index since the last review plus 3%. Interest on late payment accrues at 6% above the Bank of England base rate.

2.4 Pass-through costs. For a Supported Component in Hosted Mode, Novosapien holds the cloud, AI model and observability accounts and pays for them. Novosapien recharges those costs to TXN at the amount billed to Novosapien **plus a 10% administration fee**, invoiced monthly in arrears with a copy of the underlying provider statements. Novosapien tells TXN before any material change in the run rate. **No pass-through applies to a component in Supplier Mode**, where TXN holds the provider accounts directly and pays them. This clause governs the recharge of these costs; where it differs from clause 3.7(c) of the Master Service Agreement, this clause prevails.

3. What the fee covers

3.1 Run and monitor. Novosapien's Agent Ops platform watches model usage, cost, agent performance and anomalies across the agent fleet, with proactive alerting before issues reach users.

3.2 Agentic incident response. Novosapien's monitoring agents observe the Supported System's error logs and telemetry continuously, at every Support Tier. When an error is detected:

(a) an agent first attempts automated remediation, which may include applying a known fix or rolling back the change that caused the error, within the agent's authorised scope and without bypassing the approval and permission model in the Master Service Agreement;

(b) if automated remediation does not resolve the error, the agent escalates it as an Incident: it notifies a human through the **Support Channels**, being the shared Slack channel between the parties and Novosapien's support email address support@novosapien.ai, both available to both parties; assigns a provisional Priority under Schedule 2; and includes the diagnostic detail available, including the error, the affected components, the remediation attempted and its result, and the suspected cause;

(c) a provisional Priority may be re-graded on human review. Response targets run from the escalation notification in (b), or from TXN's report under clause 3.5, whichever is earlier.

3.3 Keep healthy. Novosapien maintains the Supported System as TXN's Core API and documentation change, including prompt tuning, guardrail adjustments and small enhancements.

3.4 Support Allocation. The fee includes up to **20 hours per month** of keep-healthy and continuous-improvement work under clauses 3.1 and 3.3. Incident response to the targets in Schedule 2 is part of the managed service and does not consume the Support Allocation; a persistent pattern of Incidents is addressed through the service reviews in clause 3.7, not charged by the hour. Unused hours do not roll over.

3.5 Incident response. During Service Hours, Novosapien responds to and resolves Incidents through the Support Channels to the Priority targets in Schedule 2. What resolution means depends on the operating mode of the affected component: see clause 4.3.

3.6 Change requests. Work beyond the Support Allocation, or any new scope, is agreed as a change request and charged at the day rates in Schedule 3.

3.7 Reporting and reviews. Novosapien provides a monthly service report: Incidents, automated remediations and escalations, response performance, Availability for Hosted Mode components, Support Allocation used, paused-clock periods under clause 4.4, break-glass access grants under clause 4.5, pass-through costs under clause 2.4, and the confirmed Service Commencement Dates. At the Extended tier the parties hold a quarterly service review; at Mission Critical, a monthly one. At every tier, Novosapien provides a written post-incident report within 5 Business Days of resolving any Priority 1 Incident, covering root cause, impact, remediation and prevention.

3.8 Tier changes. TXN may change Support Tier on 30 days' written notice, effective from the next billing month, at the charges agreed for the new tier. A downgrade below the tier TXN's regulatory obligations require needs TXN's written confirmation.

4. How Novosapien supports each component

Who hosts a component decides what Novosapien can actually do about it. This clause states the two modes, and what each one means for resolution, for the clock and for access.

4.1 Two operating modes. Each Supported Component is supported in one of two modes, identified for each component in Schedule 1:

(a) Hosted Mode. Novosapien hosts and runs the component in its own cloud subscription. Novosapien controls the infrastructure, and is therefore responsible for its availability, its backup and recovery, and the security of the stack it runs on. At the date of this Agreement the **Knowledge Hub AI Assistant is the only component in Hosted Mode**.

(b) Supplier Mode. TXN or Direct Transact hosts and runs the component in the TXN Production Environment. Direct Transact controls all access and **is the only party that may deploy to it**. Novosapien supplies the software, the fixes, the releases, the runbooks, the release evidence and third-line expertise. Novosapien does not operate the component and holds no standing access to it.

4.2 Moving between modes. A component moves from Hosted Mode to Supplier Mode at its Production Cutover, confirmed in writing by both parties. Until the parties confirm it, the component stays in Hosted Mode, and nothing elsewhere in this Agreement displaces that for any period in which it is not actually the case.

4.3 What resolution means in each mode. In **Hosted Mode**, an Incident is resolved when Novosapien restores material functionality, whether by a fix or by a reasonable workaround, with a permanent fix to follow. In **Supplier Mode**, Novosapien cannot deploy, so an Incident is resolved when Novosapien **delivers to TXN's release process a tested fix, or a workaround that restores material functionality**, together with the release notes and test evidence that process requires. The resolution target is met on that delivery. Deployment, and the timing of deployment, are TXN's and Direct Transact's, and the time they take is not counted against Novosapien.

4.4 When the clock pauses. Response and resolution targets pause while Novosapien is waiting on TXN or another partner for information, for a decision, for access under clause 4.5, or for a release approval or deployment slot. Each pause is recorded in the monthly service report with the time it started and ended, so the measurement is auditable rather than asserted.

4.5 Break-glass access. In Supplier Mode Novosapien holds no standing access. Where diagnosing or fixing an Incident genuinely requires access to the TXN Production Environment, or to data held in it, Novosapien requests that access in writing through the Support Channels, naming the individual who needs it, the systems concerned, the purpose, and the period it expects to need. TXN or Direct Transact grants it for a defined period and withdraws it at the end of that period. Each grant and withdrawal is logged by both parties and reported under clause 3.7. Novosapien accesses only what the Incident requires. The data protection consequence is set out in clause 10.3.

5. Availability

5.1 Novosapien commits to the monthly Availability target of the selected Support Tier (Schedule 2) **for Supported Components in Hosted Mode only**, measured under Schedule 2.

5.2 No availability commitment in Supplier Mode. For a component in Supplier Mode, TXN or Direct Transact hosts it, operates it and deploys to it. Novosapien therefore gives **no Availability target and no Availability measurement** for it, and no Availability-based remedy or termination right arises in respect of it. What Novosapien commits to for those components is the response and resolution targets in Schedule 2, as clause 4.3 defines them.

5.3 Availability excludes the matters in clause 8 (agreed maintenance, third-party or model-provider outages, TXN-caused or partner-caused issues, and force majeure).

6. TXN obligations

6.1 TXN reports Incidents through the Support Channels with enough detail to reproduce them; gives Novosapien the access and information it reasonably needs, including deciding break-glass requests under clause 4.5 without undue delay; keeps its own systems and credentials in order; and uses the Supported System within its documented scope.

6.2 For Supplier Mode components, TXN is responsible for operating the TXN Production Environment, for its availability, backup and recovery, for its security and access control, and for deploying the fixes and releases Novosapien delivers. TXN procures the same from Direct Transact.

7. Service performance

7.1 Novosapien monitors its performance against the targets in Schedule 2 and reports it monthly under clause 3.7. Missing a target in a given month is not of itself a material breach, but the chronic-failure right in Schedule 2 applies, and any claim for service failures is subject to the liability cap in clause 11.2. **No service credits apply under this Agreement.**

8. Exclusions

8.1 Novosapien is not responsible for issues caused by: agreed maintenance windows; TXN's own systems, data or misuse; changes TXN or another partner made outside change control; the unavailability or failure of third-party services, hosting or AI model providers whose availability Novosapien does not control; or force majeure. Materially degraded AI output is not excluded on this ground: it is handled as an Incident under clause 9.1 and Schedule 2.

8.2 The TXN Production Environment. For Supplier Mode components, the hosting, infrastructure and multi-tenancy architecture are provided and managed by TXN or its other partners, not by Novosapien (clause 4.6 of the Master Service Agreement). A failure or degradation caused by them is not an Incident caused by Novosapien. This clause does not apply to a component in Hosted Mode, where Novosapien hosts and is responsible.

8.3 For the matters in this clause 8, downtime they cause is excluded from Availability measurement, does not count toward chronic failure, and Novosapien has no liability for them (clause 11.2). For hosting, TXN-caused and partner-caused matters, the response and resolution targets also do not apply. For AI model-provider unavailability, Novosapien still owes the Schedule 2 response target and will use reasonable endeavours to mitigate, including failover to an alternative model where the architecture allows; the resolution target and Availability measurement are suspended only for the period of the provider's unavailability.

8.4 Detection and alerting. Novosapien supports the Agent Inbox, being the surface that receives an alert, explains it, proposes an action and executes it on approval. Detection, monitoring and thresholds sit with Direct Transact and the Stackworx Console. A failure of those systems, or of the feed that carries alerts and change events into the Agent Inbox, is not an Incident under this Agreement and is excluded from every service level, Availability measurement and response or resolution target.

9. AI-specific support terms

9.1 The Supported System uses generative and agentic AI whose output is generated and probabilistic. Materially degraded output quality is handled as an Incident under the Priority definitions, but Novosapien does not warrant that AI output is accurate, complete or fit for a particular purpose, and TXN keeps appropriate human oversight for material decisions, consistent with the advise-do-not-decide model.

9.2 Where the Supported System depends on a third-party model provider, Novosapien uses reasonable endeavours to maintain service and manages provider changes under change control, but is not liable for the provider's failures (clause 8).

9.3 Security and regulatory incidents. In every operating mode, Novosapien notifies TXN without undue delay, and in any event **within 24 hours**, on becoming aware of a personal data breach or material security incident affecting the Supported System, with the information TXN needs for its own notification obligations including the 72-hour window under the GDPR, and gives TXN reasonable assistance with its regulatory incident reporting, including major-incident reporting under Regulation (EU) 2022/2554 (DORA) where it applies to TXN.

9.4 Regulatory cooperation. Clauses 4.4 (Regulatory cooperation), 4.4A (DORA termination rights) and 4.4B (Critical or important function) of the Master Service Agreement apply to this Agreement as they apply to that agreement, with references to the Services read as references to the Support and the Supported System.

10. Data protection: which role Novosapien holds, and when

Novosapien's data protection role is not constant across this Agreement. It follows the operating mode. The parties record it expressly so that neither side has to infer it.

Situation	Novosapien's role	What governs it
Hosted Mode Novosapien hosts	**Processor**, continuously	The Data Processing Agreement (Interim Hosting) for the Knowledge Hub; Schedule 4 for any other Hosted Mode component
Supplier Mode DT hosts, no access	**Not a processor.** Software supplier	Confidentiality obligations only. No personal data reaches Novosapien
Break-glass Access granted to diagnose	**Processor**, for that window only	Schedule 4, in full, for the duration of the grant

10.1 Hosted Mode: Novosapien is a processor. Where a Supported Component is in Hosted Mode, Novosapien processes personal data on TXN's behalf as processor, with TXN as controller, for as long as that mode lasts. For the Knowledge Hub AI Assistant, that processing is governed by the **Data Processing Agreement (Interim Hosting)** between the parties, which prevails over this Agreement in respect of it. Schedule 4 governs any other component in Hosted Mode.

10.2 Supplier Mode: Novosapien is not a processor. Where a Supported Component is in Supplier Mode and Novosapien holds no access to the TXN Production Environment or to personal data in it, **Novosapien does not process personal data on TXN's behalf in respect of that component**. It acts as a supplier of software and expertise, and only its confidentiality obligations under the Master Service Agreement apply. Novosapien does not require TXN personal data to provide Supplier Mode support in the ordinary course, and TXN will not send it any. If TXN sends personal data to Novosapien without a grant under clause 4.5, Novosapien tells TXN and the parties agree whether to delete it or to treat it under clause 10.3.

10.3 Break-glass: a processor for the window only. Where TXN or Direct Transact grants access under clause 4.5 and Novosapien accesses personal data as a result, **Novosapien is a processor for the duration of that grant**, and Schedule 4 applies in full to that processing and to anything Novosapien retains from it. The written grant is TXN's documented instruction for the purposes of Article 28. Novosapien processes only what the Incident requires, deletes any personal data it extracted for the diagnosis when the Incident is closed, and confirms the deletion in the monthly service report.

10.4 Any transfer of personal data outside the United Kingdom or the EEA is made only under a valid transfer mechanism, being the EU Standard Contractual Clauses and/or the UK IDTA or UK Addendum as applicable, with a completed transfer risk assessment. TXN is established in Cyprus, so the EU GDPR governs TXN's processing as controller; the UK GDPR applies to Novosapien's processing in the United Kingdom.

11. Liability and general

11.1 Neither party excludes or limits liability for death or personal injury caused by its negligence, for fraud, or for anything that cannot lawfully be limited. The cap in clause 11.2 does not apply to a breach of confidentiality or to either party's wilful misconduct.

11.2 Subject to clause 11.1, neither party is liable for indirect or consequential loss, and **each party's total liability under this Agreement is capped at the greater of £50,000 and the total charges paid under this Agreement in the 12 months before the event** giving rise to the claim. This cap is separate from, and not shared with, the caps under the Master Service Agreement or the Data Processing Agreement (Interim Hosting), each of which applies only to its own agreement. Novosapien has no liability for the matters excluded in clause 8, and nothing arising from them counts toward the cap.

11.3 Term and termination. After the initial term in clause 2.1, either party may terminate on 30 days' written notice. During the initial term, either party may terminate only for the other's uncured material breach, on 14 days' notice to cure, including chronic failure under Schedule 2, or on the other's insolvency. On termination Novosapien gives reasonable transition assistance at the day rates in Schedule 3 and returns or deletes TXN's data. Confidentiality, data protection and liability survive.

11.4 General. Entire agreement for the support it covers, excluding fraud; variation in writing signed by both parties; no third-party rights under the Contracts (Rights of Third Parties) Act 1999; independent contractors; no waiver by delay; severance; counterparts and electronic signature. Novosapien maintains the insurance described in the Master Service Agreement throughout the term. Notices are given in writing by email or letter: to Novosapien at info@novosapien.ai or its registered office; to TXN at or its registered office. An email notice is deemed received on the next Business Day after sending, unless the sender receives a delivery-failure message. This Agreement is governed by the law of England and Wales, and the courts of England and Wales have exclusive jurisdiction.

SCHEDULE 1

Supported System

Each component is supported from its own Service Commencement Date (clause 2.2) and in the operating mode shown (clause 4.1). A component with no confirmed date is not yet in support.

Part A: Hosted Mode, Novosapien hosts

Component	What is supported	Service Commencement Date
Knowledge Hub AI Assistant	The documentation co-pilot and the documentation MCP server, answering from TXN's public documentation, hosted by Novosapien in its own Azure subscription in North Europe. Includes sandbox assist against the mock API, the anomaly loop and the email gate	The Commencement Date under clause 2.1 **Confirmed date:** _____

Novosapien owns Availability, backup and recovery for this component (clauses 4.1(a) and 5.1), and is a processor for it under the Data Processing Agreement (Interim Hosting) (clause 10.1). It moves to Part B at its Production Cutover (clause 4.2).

Part B: Supplier Mode, TXN and Direct Transact host

The Console and platform components Novosapien builds under the Master Service Agreement. **No Service Commencement Date is fixed for these.** Each enters support when it first operates in live service in the TXN Production Environment and the parties confirm the date in writing.

Component	What is supported	Service Commencement Date
Agent Access Layer	The MCP server wrapping the Core API as agent-callable tools, the tool catalogue, permission scoping, the approval gate and audit attribution	_____
Co-pilot	The reactive in-Console assistant: conversational Q&A, impact preview, guided configuration and onboarding, action-on-confirmation and process surfacing	_____
Agent Inbox & Alerts	The surface that receives an alert, explains what drove it, proposes an action and executes it on approval, with scheduled and on-demand reporting and notification routing. Detection and thresholds are excluded (clause 8.4)	_____
Full Agentic Experience	The conversational interface, generative UI rendering, agent orchestration, the procedure library and session persistence	_____
Internal Ops Agents	The customer onboarding agent, the knowledge engine and meeting capture	_____

Not in the Supported System

Each of the following is supported only once delivered under a later Statement of Work and added to this Schedule by written agreement: the **A2A endpoint**; **Fraud & Risk Assist**; **Reconciliation**; and **authenticated developer features**, being sign-up, the four-level access model and sandbox-log diagnosis.

Novosapien's own automated monitoring under clauses 1.2 and 3.1 runs continuously at every tier for every component in support, and is unaffected by the exclusions above.

SCHEDULE 2

Support Tier and service levels

Selected Support Tier (tick one; charges for the selected tier are in Schedule 3):

Tier	Human cover (Service Hours)	**Availability target** Hosted Mode only (clause 5.2)
✓ **Business Hours (selected)**	Monday to Friday, 09:00 to 18:00 UK time, Business Days only	99.5% / month
Extended	7 days, 08:00 to 20:00 UK time, including weekends and public holidays	99.7% / month
Mission Critical	24/7/365 for P1 and P2; 7 days, 08:00 to 20:00 for P3 and P4	99.9% / month

Automated monitoring and alerting run continuously at every tier (clause 1.2). Public holidays follow the England and Wales calendar. At the Business Hours and Extended tiers, Novosapien responds to out-of-hours P1 alerts on a reasonable-endeavours basis only, with committed targets resuming at the next Service Hours window.

Priority definitions

Priority	Definition
P1 Critical	A Supported Component unavailable or unusable across the fleet; a security incident in progress; or the kill switch (Master Service Agreement clause 3.6) engaged in response to an agent acting outside its authorised scope. No workaround
P2 High	A component down, or AI output materially degraded; workaround difficult
P3 Medium	Minor function impaired; workaround available
P4 Low	Question, cosmetic issue or minor enhancement

Response and resolution targets

SH = Service Hours of the selected tier. BD = Business Days. Mission Critical P1 and P2 targets are clock hours, around the clock. The P1 targets are the same at every tier: what a higher tier buys is the wider window in which they are committed. **Resolution is measured as clause 4.3 defines it**, which differs by operating mode, and the clock pauses under clause 4.4.

Priority	Business Hours response / resolution	Extended response / resolution	Mission Critical response / resolution
P1	15 min / 4 SH	15 min / 4 SH	15 min / 4 hours
P2	4 SH / 2 BD	2 SH / 1 day	1 hour / 8 hours
P3	1 BD / 5 BD	1 day / 4 days	4 SH / 3 days
P4	2 BD / as scheduled	2 days / as scheduled	1 day / as scheduled

Escalation and incident communications

Tier	Escalation	P1 update cadence

Business Hours	Named contact during Service Hours	Every 60 minutes during Service Hours until resolved
Extended	Duty engineer rota	Every 60 minutes during Service Hours until resolved
Mission Critical	On-call rota, named escalation manager, and a phone or page wake-up channel	Every 60 minutes until resolved

Availability measurement

Availability is measured monthly, **for Supported Components in Hosted Mode only** (clause 5.1), excluding the clause 8 exclusions and agreed maintenance windows. It is measured from the Agent Ops monitoring telemetry. The monthly service report states the measured figure and the underlying downtime events, and Novosapien makes the underlying monitoring data available on request. TXN may dispute a reported month within 10 Business Days of receiving the report, and the parties resolve the dispute in good faith by reference to that data. At the Mission Critical tier, maintenance is performed only in agreed windows, on advance notice, and outside TXN's stated peak periods.

Remedies and chronic failure

Performance against the targets above is reported monthly (clause 3.7). TXN's protections are transparency, the chronic-failure termination right below, and the liability regime in clause 11.2. **No service credits apply under this Agreement.**

A month counts as missed if	Applies to
The Availability target is missed in it	**Hosted Mode components only.** There is no Availability target in Supplier Mode (clause 5.2), so no Availability-based miss can arise for those components
The P1 response or resolution target is missed for a majority of the P1 Incidents escalated in it	All Supported Components, measured as clause 4.3 defines resolution and net of clause 4.4 pauses

If any **3 months are missed within a rolling 6-month period** (any 2 at Mission Critical), TXN may terminate this Agreement for material breach under clause 11.3.

SCHEDULE 3

Charges

Support fee by tier

The fee for the selected Support Tier applies. See clause 2.3, including when it starts.

Support Tier	Basis	Monthly fee

Business Hours (selected)	Fixed monthly, in advance; includes up to 20 hours per month (clause 3.4)	**£4,250 / mo**
Extended	Fixed monthly, in advance; includes up to 20 hours per month	£6,750 / mo
Mission Critical	Fixed monthly, in advance; includes up to 20 hours per month	£12,750 / mo

Pass-through costs, Hosted Mode only (clause 2.4)

Cost	Basis	Charge
Cloud hosting (Microsoft Azure)	The amount billed to Novosapien for the Hosted Mode environment	**Cost plus a 10% administration fee** Invoiced monthly in arrears with a copy of the underlying provider statements
AI model consumption	The amount billed to Novosapien for model usage by the Hosted Mode components	
Observability and error reporting	The amount billed to Novosapien for the Hosted Mode environment	

No pass-through applies to a component in Supplier Mode, where TXN holds the provider accounts and pays them directly. Novosapien tells TXN before any material change in the run rate, and provides an indicative monthly estimate on request.

Standard day rates

For change requests and work beyond the Support Allocation (clause 3.6), and for transition assistance (clause 11.3).

Role	Day rate
AI Product Owner	£950
AI Engineer	£850
Forward Deploy Engineer	£750

All figures are exclusive of VAT.

> **Most-favoured pricing.** If Novosapien quotes TXN for a change of Support Tier, a new tier, or a re-pricing of an existing tier, the quoted terms will be no less favourable than those Novosapien then offers any other customer for materially comparable service levels and scope.

SCHEDULE 4

Data Processing (Article 28, EU GDPR and UK GDPR)

This Schedule applies where clause 10 says it applies: to a Hosted Mode component other than the Knowledge Hub AI Assistant, and to any break-glass access granted under clause 4.5. It does **not** apply to Supplier Mode support, where Novosapien is not a processor (clause 10.2). For the Knowledge Hub AI Assistant, the Data Processing Agreement (Interim Hosting) applies instead and prevails.

Part A: Processing obligations

Where Novosapien processes personal data on TXN's behalf under this Agreement, Novosapien will:

(a) Instructions. Process the personal data only on TXN's documented instructions, including on any transfer of personal data to a third country or an international organisation, unless required to do otherwise by law, in which case Novosapien informs TXN of that requirement before processing unless the law prohibits it on important grounds of public interest. A written break-glass grant under clause 4.5 is a documented instruction;

(b) People. Ensure that everyone it authorises to process the personal data is bound by a written duty of confidentiality;

(c) Security. Implement and maintain the technical and organisational measures in Part C, and keep them appropriate to the risk as Article 32 requires;

(d) Sub-processors. Engage only the sub-processors listed in Part B, impose materially equivalent obligations on them in writing, remain fully liable for their performance, and give TXN at least 20 Business Days' prior written notice of any intended addition or replacement so TXN may object on reasonable grounds. A provider used only as a failover is still a sub-processor and is listed in Part B. AI model and hosting providers engaged on TXN's own accounts are TXN's processors, not Novosapien's sub-processors;

(e) Data subject rights. Taking into account the nature of the processing, help TXN by appropriate technical and organisational measures to respond to a data subject exercising their rights, and pass any request Novosapien receives directly to TXN without responding to it itself;

(f) Assistance and breach notice. Help TXN meet its obligations under Articles 32 to 36, and notify TXN of a personal data breach without undue delay and in any event within 24 hours of becoming aware of it, per clause 9.3;

(g) End of processing. Return or delete the personal data at TXN's choice, unless the law requires a copy to be kept. For break-glass access, delete any personal data extracted for the diagnosis when the Incident is closed (clause 10.3);

(h) Audit and records. Make available the information TXN reasonably needs to demonstrate compliance with Article 28, allow and contribute to audits on reasonable notice subject to confidentiality, and maintain the record of processing categories Article 30(2) requires; and

(i) Unlawful instructions. Immediately inform TXN if, in its opinion, an instruction infringes the Data Protection Laws.

Part B: Processing particulars

Subject matter & duration	Personal data processed in providing Support, for the term of this Agreement and any period needed for return or deletion under clause 11.3. For break-glass access, the duration of the grant
Nature & purpose	Operating, monitoring and maintaining a Hosted Mode component; and, under a break-glass grant, diagnosing and fixing an Incident
Types of personal data	Console user account and activity data; support-ticket, Incident and log content; developer-portal user data. **No cardholder data** (Master Service Agreement clause 4.5)
Data subjects	TXN's staff and client operators using the Console; developers and integrators using the Developer Portal
Applicable regime	EU GDPR (TXN Global Limited is established in Cyprus); UK GDPR for Novosapien's processing in the United Kingdom
Processing locations	The European Union, being the environment in which the component runs, and the United Kingdom, being Novosapien's operations and support access. Notice of changes to Novosapien's own locations per Master Service Agreement clause 4.4(b)
Novosapien sub-processors	**None at the date of this Agreement for Supplier Mode or break-glass support.** Novosapien's Agent Ops monitoring and support tooling is operated by Novosapien itself. Sub-processors for the Knowledge Hub AI Assistant are listed in Annex C of the Data Processing Agreement (Interim Hosting). Any future sub-processor is engaged only with notice and a right to object under Part A(d)
International transfers	EEA to UK under the European Commission's adequacy decision for the United Kingdom; EU Standard Contractual Clauses and/or the UK IDTA or UK Addendum, with a transfer risk assessment, for any transfer Novosapien makes outside the UK or EEA. If the adequacy decision is suspended, withdrawn or expires, the parties promptly put a valid mechanism in place
Breach notification	Without undue delay and in any event within 24 hours of becoming aware, with the information TXN needs for its own 72-hour notification obligations (clause 9.3)
Deletion / return	On termination, per clause 11.3. For break-glass, on closing the Incident, confirmed in the monthly service report

Part C: Technical and organisational measures

The measures below cover what Novosapien controls: its access, its tooling, its development practice and its personnel. For a Hosted Mode component Novosapien also controls the infrastructure, and Annex B of the Data Processing Agreement (Interim Hosting) states the measures that apply to the environment it hosts.

(a) Governance. Novosapien maintains an information-security programme owned by Brett St Clair (Co-Founder), reviewed at least annually. Novosapien does not hold ISO 27001 or SOC 2 certification, and does not claim to.

(b) Access control. Access to systems processing TXN data is granted on a least-privilege, role-based basis to named individual accounts, with no shared accounts and multi-factor authentication enforced on all systems used to provide Support. Credentials are held in a password manager; secrets live in a managed secret store, never in source code. Access is reviewed periodically and removed within one Business Day when no longer required, including for leavers. Break-glass access is additionally time-boxed and logged under clause 4.5.

(c) Encryption. Data in transit is encrypted using TLS 1.2 or higher. Data at rest is encrypted using AES-256 or equivalent via the hosting platform's managed encryption.

(d) Separation. Development and production environments are separated. TXN personal data is not used in development or test environments.

(e) Secure development. Code changes are reviewed before merge to a protected main branch and released through CI/CD. Dependencies are monitored for known vulnerabilities, and critical vulnerabilities in components Novosapien controls are remediated promptly, targeting 14 days for critical severity.

(f) Logging and monitoring. Administrative and support access to systems holding TXN data is logged. Security-relevant logs are retained for at least 90 days.

(g) Endpoint security. Devices used to provide Support have full-disk encryption, screen lock and automatic security updates enabled.

(h) Personnel. All personnel with access to TXN data are bound by written confidentiality obligations and receive documented security-awareness guidance on joining.

(i) Incident response. Novosapien maintains a documented incident-response process covering identification, containment, remediation and post-incident review, and notifies TXN of a personal data breach within 24 hours of becoming aware (clause 9.3).

(j) Resilience and backup. For a Supplier Mode component, backup and disaster recovery are TXN's responsibility (clause 6.2). For a Hosted Mode component they are Novosapien's (clause 4.1(a)). Novosapien keeps its own configuration defined as code and re-deployable.

(k) No degradation. Novosapien flows materially equivalent obligations down to its own sub-processors and will not materially reduce the measures in this Part C during the term.
